## **STANDARD SPECIFICATION**

### **HULLFORM & CONSTRUCTION**

Designed by Bernard Olesinski and the Fairline Design Team

Deep 'V' forward; 18° deadrise aft

Isophthalic gel coat backed by an isophthalic resin-rich powder-bound glass mat

All gel coat and glass fibre is laid up by hand, incorporating chopped strand glass mat and unidirectional and woven rovings

Transverse and longitudinal strengthening stringers throughout hull

Full length moulded spray deflectors

The integral bathing platform gives the boat a longer waterline length for improved performance, particularly at reduced power settings

Engine bearers are moulded into the hull

The propellers are set in semi-tunnels enabling the engines to be located further aft, also reducing draught and improving efficiency by reducing the shaft angle

Hull/deck join bonded and bolted

The deck incorporates polyurethane foam cores for high strength and excellent thermal insulation
